DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 4 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Ichimura (WO 02/057662 A1) (6,912,803 for translation). Ichimura discloses a travel control device for a hydraulically driven vehicle with a hydraulic pump 3 driven by a prime mover 2, a traveling motor 1 driven with pressure oil delivered from the hydraulic pump 3, a control valve 4 for traveling that controls a flow rate of the pressure oil delivered from the hydraulic pump 3 to the traveling motor 1, a counterbalance valve 5 switched in response to a motor load pressure supplied via the control valve 4, that generates a braking pressure at a conduit disposed on a return side of the traveling motor 1 as the load pressure becomes lower, an overspeed detection means 301 for detecting an overspeed state in the traveling motor 1, a motor overspeed inhibiting means 305 for inhibiting rotation of the traveling motor 1 if the overspeed detection means 301 detects an overspeed state in the traveling motor 1 until a braking pressure is generated through a switchover at the counterbalance valve 4 and the traveling motor 1 is no longer in the overspeed state, and a rotation speed detection means 26 for detecting a rotation speed of the traveling motor, wherein the overspeed detection means 301 detects the overspeed state when the motor rotation speed detected by the rotation speed detection means 26 is equal to or greater than a

predetermined value, and the motor overspeed inhibiting means 305 is a prime mover rotation speed reducing means 305 for reducing a rotation speed of the prime mover to a greater extent when the detected motor rotation speed is at a higher level.

Allowable Subject Matter

Claims 3, 5, 7, and 8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Prior Art

Prior art made of record but not relied upon is considered pertinent to Applicant's disclosure and consists of two patents.

Ichimura et al '688, Ichimura '803, and Ohkura et al. are cited to show travel control devices.

Contact Information

Any inquiry concerning this communication or earlier communication from the examiner should be directed to Thomas Lazo whose telephone number is (571) 272-4818. The examiner can normally be reached on Monday-Friday from 8:00 am to 4:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor Edward Look, can be reached on (571) 272-4820. The fax phone number for this Group is (571) 273-8300.
